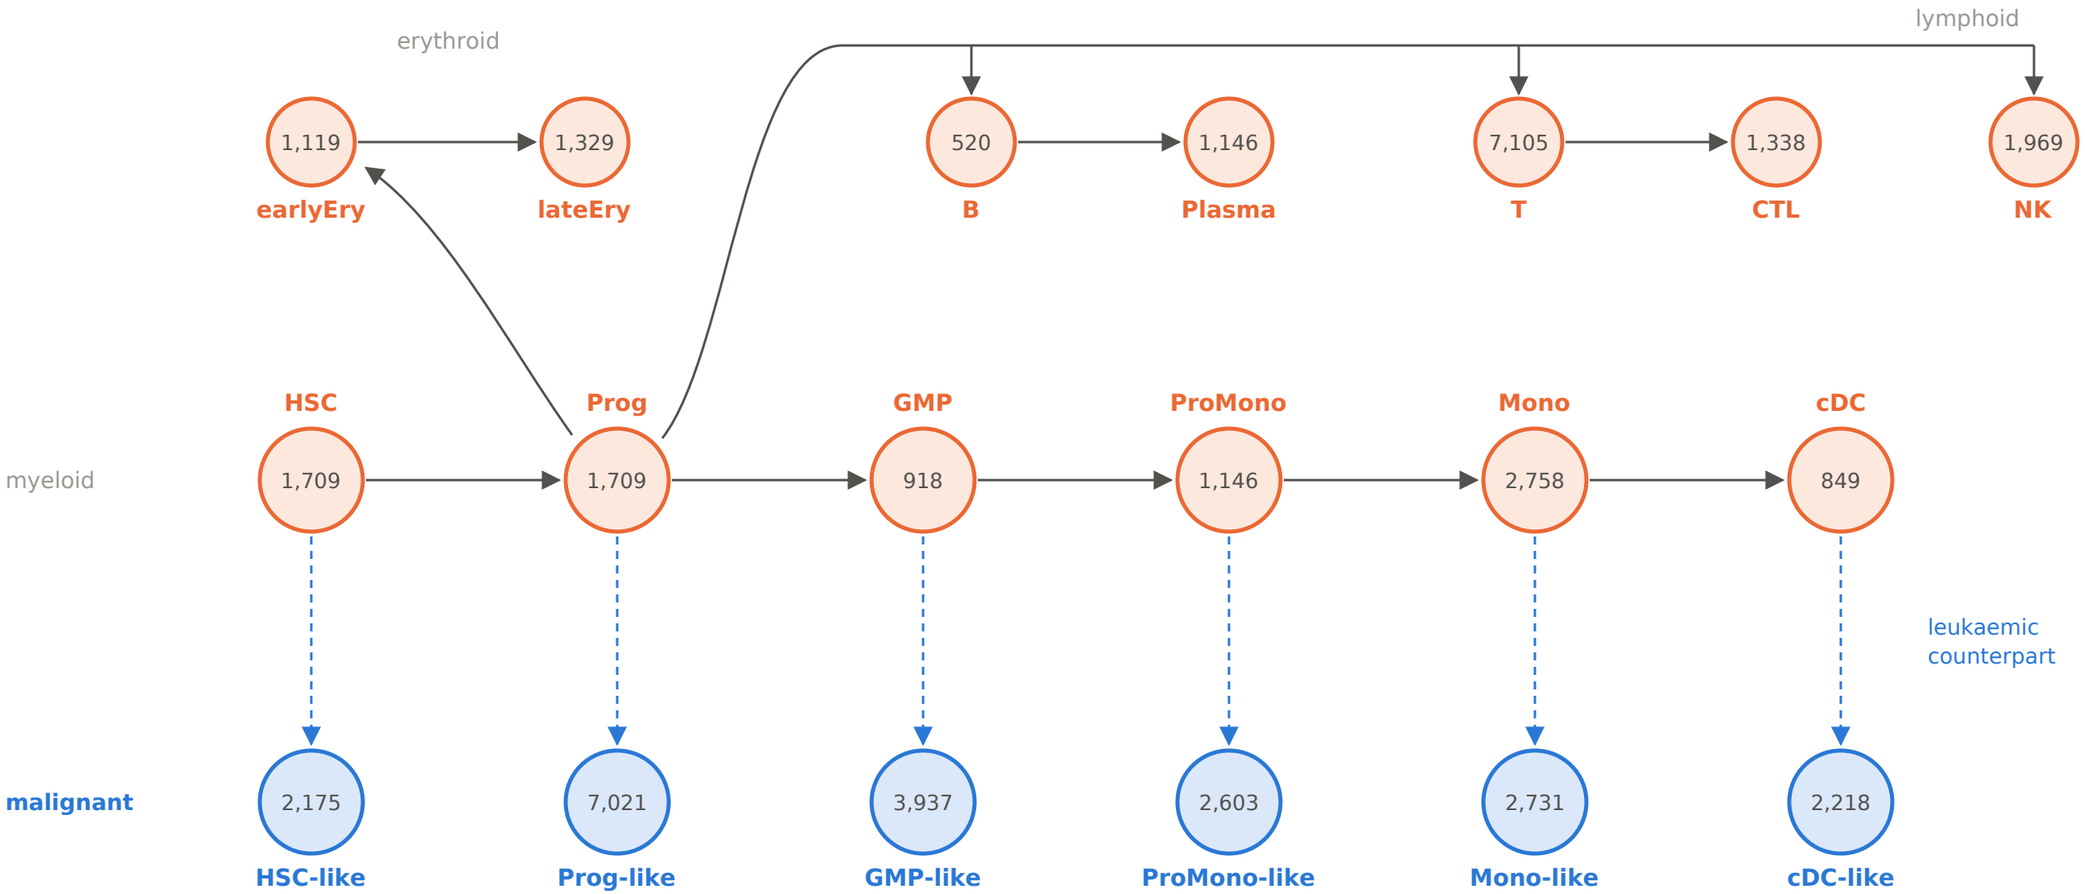
van Galen et al. 2019 — AML bone marrow

16 AML patients and 5 healthy donors, 40 bone marrow aspirates (GEO GSE116256). Each malignant population is named after the normal cell type it most resembles.



normal population malignant (-like), from the AML patients numbers are cells in the object

21 annotated populations, 44,823 cells. 19 kept and 29,752 cells entered the networks (at most 2,000 per identity); pDC (225 cells) and ProB (298) fell below the 500-cell minimum.
